Introducing Lumenis Lightsheer® DUET™

The Newest Innovation in Laser Hair Removal!

The most popular laser treatment in the U.S. just got a lot more convenient and much less painful. The Lumenis Lightsheer® DUET™ is a new high-speed hair removal laser which offers a permanent method to removing unwanted hair for men and woman. A breakthrough in laser hair removal, this new technology works in a fraction of the time of past procedures and is effective for men and women of all skin color. This new technology reduces treatment time by seventy-five percent! Dr. Dale Isaacson and Dr. Marilyn Berzin are the first in D.C. to offer the new LightSheer® DUET™ for no-pain-all-gain hair removal.

Advantages to the new system include:

- Pain-free. No need for topical anesthesia
- New laser means fewer treatments and lower cost
- Works on all skin colors

What is Juvederm?

Juvederm™ is used to smooth out wrinkles, plump lips, remove smile lines, nasolabial folds and acne scars. Hyaluronic acid occurs naturally in our body and helps maintain youthful, elastic skin; however, we lose it as we age.

Juvederm™ injections contain a hyaluronic acid gel, a natural complex sugar that bolsters elasticity. It's injected below the skin's surface to cushion and hydrate the skin, leaving it smoother, more supple and more refreshed looking - immediately.

The pliant gel provides a smoother, more natural-looking appearance than some of the more rigid treatments and is thought to last longer. After six to twelve months, the biocompatible compound is naturally absorbed into the body.

Look 10 Years Younger Before 2010!

Please save the date...

Come join Dr. Isaacson and Dr. Berzin to learn about the latest advancements in cosmetic procedures

NEW

LightSheer® DUET™ uses vacuum-assist technology to stretch the dermis layer of skin, allowing targeted hair follicles to be better reached by the energy source. This stops hair growth faster and more effectively. Adding suction to the hair removal process enables the laser to penetrate deeper to stop future growth. The increased efficacy and dramatically larger spot size means fewer treatments at lower costs.

With its new technology, Lightsheer® DUET™ is ending major criticism that laser hair removal has not been effective for darker skin tones. As the machine gently stretches the skin, the skin's pigmentation is spread over a larger surface area, now making it possible to treat all patients, regardless of skin color.

Thermage™ CPT

The new Thermage™ CPT System represents a leap forward in skin tightening and contouring technology

With Thermage™ we can tighten up sagging tissue all over your body - around your eyes, mouth, jaw line, neck, abdomen, elbows, knees or upper arms - by using radiofrequency instead of scalpels. With the newly designed cellulite and deep tips we can also improve cellulite and contour your body by reducing fat pockets on your abdomen, hips, thighs and back. Superior results and greater patient comfort are at the core of the new system.

- Improved efficacy due to more uniform heating and increased volume of tissue reaching therapeutic temperature
- Comfort Pulse Technology, including a vibrating handpiece, to deliver enhanced patient comfort
- 100% of study patients preferred treatment with the Thermage CPT system vs. treatment with prior technologies

and complimentary consultations!

Date: Wednesday, October 14th, 2009
4:30-7:30PM

RSVP:

info@dcdermdocs.com or 202.822.9591

- Bring a friend and you both receive a free SILK™Peel or Chemical Peel treatment!

Formal invitation to follow

- Average patient satisfaction scores 3 months post treatment were 4.2 out of 5 (1=dissatisfied, 5=very satisfied)

Sculptra™

Now FDA Approved as an aesthetic volumizer!

Has your face lost some of its contour... maybe your cheeks have hollowed out or your chin has indented or your eyes have sunken? Maybe you have deep skin folds or wrinkles because your face is losing fat?

Well, Sculptra™ is here to help. It's a sculpting agent that corrects the signs of facial fat loss by using a safe, synthetic material [Poly-L-lactic acid] that is injected deep into your skin. Once it's injected, the body will then build collagen up around it, causing your skin tissue to thicken and, ultimately, fill in any facial depressions.

The results speak for themselves - Sculptra™ provides up to an 80% improvement in the treated areas and lasts up to two years or more by actually stimulating collagen growth as it is broken down by the body. This produces a gradual and significant increase in skin thickness. When the benefits of other dermal fillers begin to fade in a couple months, Sculptra™ will actually still be improving your skin's volume and youthful appearance.
